

Your named accounts, worked as accounts.

You name the companies. We map the buying committee inside each one and run the program that gets them engaging.

WHAT YOU GET

The list, agreed. Your named accounts, locked together on the audit call.

Committees mapped. The buying committee inside each account, built from verified records. Also buyable standalone at data rates.

Committee-aware sequences. Different angles per role inside the same account, sent from our infrastructure.

Replies routed. Straight to your closers, thread attached.

WHAT THE REPORT SHOWS

Per-account heat: which named targets have real people engaging, who inside, trending up or quiet. Engagement is counted per human, so a scanner never lights up an account.

WHAT WE DO NOT PROMISE

Full committee coverage: some companies publish almost nobody, and we do not invent people.

Meetings: this program sells engagement; the rep services pair with it.

PRICING

Programs are quoted by account count. Committee mapping is available standalone at data rates.

Quoted after the free pipeline audit. The audit is free, the findings are yours in writing either way, and there is a quote at the end with no obligation to take it.

HOW IT STARTS

With the free pipeline audit: send us what you run today, keep the findings in writing either way.
